Qualabs Challenge

Functional guide to run and describe how to use the program

1.) Installing the Go compiler:

a. By installing the compiler you can run the source code using the following command: go run. -option A | B

b. In case the data is not in the data directory use the following option: go run. -source ./dir -option B

2.) Functional description of the operations that are executed

a. Solution A "SolutionA". This method solves requirement A of the challenge

b. Solution B "SolutionB". This method solves requirement B of the challenge.

3.) Compiling the Project. Refer to the readme.md file for complete information

Note.

In case you do not intend to install the compiler, the binary executable files for the three most used platforms, Windows|Linux|Mac, are left in the root of the project.
